# Adarsh Dwivedi

**Business Analyst**

+91-9305597756 | 23ucs509@lnmiit.ac.in | linkedin.com/in/adarshdwivedi30 | github.com/adarshcod30

Final-year CS engineer who translates a stated business problem into something measurable and shippable. Turned five problems stated by the Karnataka State Crime Records Bureau into one deployed platform, set measurable acceptance targets on an analytics build and reported against every one of them, and led a 150+ member society. Requirements, stakeholders and defining what good looks like are familiar ground.

## EXPERIENCE

**Deloitte India, Digital Excellence Centre** **Jun 2026 - Aug 2026**

*AI Engineer (Agentic AI) Intern* Gurugram, India

- Evaluated three deployment routes against Deloitte's constraints and recommended Aegra: the commercial platform would move agent state outside the firm and an in-house runtime would rebuild a mature tool, while Aegra is open source on FastAPI and PostgreSQL.
- Proved the new path on the live SAP tenant: a Bank Accounting goal was planned into 8 configuration tasks, executed in a real browser through Playwright MCP, recovered from a duplicate-entry conflict and a mis-filled field, and finished 8 of 8 in about 15 minutes.
- Scoped the migration so every consumer kept working: the public API, business logic and front end stayed unchanged, and a single setting switches back to the original execution path with no redeployment.

**Suganda Skincare, Growth Analysis (Contract)** **Sep 2026 - Oct 2026**

*Data and Growth Analyst, Freelance* Remote

- A D2C skincare brand had shrunk 44% from its COVID peak and had no advertising budget, so the usual growth lever was off the table. Reframed revenue as customers x orders per customer x order value, which showed customer count explains 89% of the fall and that frequency and order value, the two levers that cost nothing, had never been worked.
- Found the catalogue had split in two: commodity single-active serums fell 84.9% from 2021 to 2025 while the rest grew 77.1%, and a 43.6% re-buy rate and a 22.8% median price premium showed neither product quality nor price alone explained it.
- Turned the findings into zero-cost actions: acquisition discounts of 15 to 20% lift repeat purchase to 41.3% against 31.6% at full price, 30% and above falls to 26.8%, and an order drop in the week of 12 January 2026 traced to a lost domain, about Rs 21.8 lakh over 36 weeks.

## PROJECTS

**Kadi, Crime Analytics Platform for the Karnataka State Police** *(KSP Datathon 2026)* | **Live** | **GitHub** Zoho Catalyst, React, Graph

- The Karnataka State Crime Records Bureau stated that fragmented station-level data blocked state-wide analysis. Scoped one product where a station sees its own slice and the bureau reads the whole state off the same graph.
- Shipped end to end over 50 days on Zoho Catalyst: command dashboard, case-linkage graph, offender watchlist, drillable map and a bilingual assistant, reaching Level 2 of the datathon.
- Chose to surface shared modus operandi as a ranked hypothesis rather than a name, so the tool could not read as an accusation, and paired every flagged case with a reason and a next action.

**Air Cargo Intelligence, Agentic Analytics over Indian Aviation Data** | **Live** | **GitHub** Multi-Agent Analytics, Open Government Data

- Turned fragmented public aviation data into a product that answers ranking and anomaly questions directly, rather than handing users another raw data portal.
- Set measurable acceptance targets before building and reported against them: 99.6% of rows reconciled without manual mapping, 11.1% median forecast error, and every document either extracted or refused with a recorded reason.

**CreditSetu, Explainable Credit Scoring for Thin-File Borrowers** *(Published on PyPI)* | **Live** | **GitHub** LightGBM, SHAP, PyPI

- Built for the lenders that actually underwrite thin-file borrowers, NBFCs, microfinance institutions and BNPL platforms, and shipped it as a pip-installable library they embed rather than another dashboard to stand up.
- Made every decision explainable by construction, with SHAP attributions doubling as regulator-style adverse-action reasons, and currency and policy configurable per market.

## TECHNICAL SKILLS

**Business and Product:** Product Strategy, Product Discovery, Problem Framing, PRD and Technical Specification, Roadmapping, Prioritisation (RICE), User Research, Metrics and KPI Definition, Adoption and Engagement, A/B Testing, Stakeholder Management, Competitive Analysis, Agile and Scrum, Go-to-Market

**Data and Analytics:** SQL, Pandas, NumPy, DuckDB, Statistical Testing, Experiment Design, H3 Geospatial Indexing, Graph Analytics, Power BI, Excel, Data Visualisation

**Technical:** FastAPI, Pydantic, Node.js, Express, REST APIs, PostgreSQL, MongoDB, DuckDB, Next.js, React, Streamlit

**Core Computer Science:** Data Structures and Algorithms, OOP, DBMS, Operating Systems, Computer Networks, System Design

## ACHIEVEMENTS

- KSP Datathon 2026 finalist: reached Level 2 with Kadi, a crime analytics platform built end to end over 50 days and deployed on Zoho Catalyst for the Karnataka State Police.
- Hacksplosion 2026, Deloitte India: cleared Levels 1, 2 and 3 with an AI-driven resume-to-job matching pipeline.

## EDUCATION

**The LNM Institute of Information Technology, Jaipur** **2023 - 2027**

*B.Tech, Computer Science and Engineering* CGPA: 7.11 / 10

## LEADERSHIP

- Coordinator, Debate Society, LNMIIT Jaipur (May 2025 - Apr 2026): led a 150+ member society across debates, discussions and inter-college competitions.
- Secretariat and Organizer, LNMIIT Model United Nations (Aug 2025 - Jan 2026): organised a large-scale MUN conference, coordinating delegates, committees, schedules and logistics.
