Final-year CS engineer who reports the false positives next to the detection rate and the limits next to the result. Reached 0.7292 ring precision against a 0.2242 base rate and published the real customers swept in per fraudster caught, benchmarked 8 model families against a 0.291% label rate and published an enforcement-bias audit of my own training data, and validated a credit model against 117,454 real borrowers to close a circularity gap. Placed 11th of 93 on a national leaderboard, with failures published beside results.

EXPERIENCE

Deloitte India, Digital Excellence Centre **Jun 2026 - Aug 2026**

AI Engineer (Agentic AI) Intern Gurugram, India

- Migrated SAP Agentic, Deloitte's system that automates SAP configuration, from LangGraph running inside a FastAPI request handler onto a self-hosted Aegra agent server, with threads, runs and checkpoints in PostgreSQL inside the firewall at no licence cost.
- Set the migration's acceptance test as field-by-field identical output between the original and migrated paths on the same input, rather than output that merely looked plausible, and held the public API unchanged so no consumer needed modification.
- Proved the new path on the live SAP tenant: a Bank Accounting goal was planned into 8 configuration tasks, executed in a real browser through Playwright MCP, recovered from a duplicate-entry conflict and a mis-filled field, and finished 8 of 8 in about 15 minutes.

PROJECTS

Orbweaver, Fraud Ring Detection in Transaction Graphs | Live | GitHub Python, Graph Analytics, Cost Modelling

- Reached 0.7292 ring precision against a 0.2242 base rate on a 35.7M-edge account graph, and reported it beside the 0.371 real customers wrongly swept in per fraudster caught.
- Sized the output to the team that has to work it, using an exact knapsack over reviewer minutes rather than flagging everything and calling it recall.
- Published 36 dated failures beside the wins, including that an adaptive attacker splitting rings into cells of three collapses precision, which is the real limit of the method.

MargaDrishti, Spatio-Temporal ML for Urban Road-Capacity Loss | Live | GitHub Python, H3, Bias Auditing, Gi* Statistics

- Built one H3-by-hourly substrate over 298k violations and 8k events, then benchmarked 8 model families on it with strictly causal lag features so nothing leaks from the future.
- Published an enforcement-bias audit of the training data itself, and reported one task as not-yet-answerable after finding the review process changed regime mid-window, with rejection jumping to 0.790 from about 0.28.
- Caught a zero-hotspot Gi* result as an artifact of the permutation p-floor rather than a finding, and documented it alongside the other published failures.

CreditSetu, Explainable Credit Scoring for Thin-File Borrowers *(Published on PyPI)* **| Live | GitHub** LightGBM, SHAP, Change-Point Detection

- Validated a credit model against 117,454 real borrowers with real default outcomes, from a 150,000-row public set after quality filtering, deliberately closing the circularity gap of evaluating on the synthetic data it was built with.
- Combined a logit-calibrated LightGBM classifier with hard compliance guardrails on bounce count, active lenders and EMI ratio, so a model score can never override a policy limit.

TECHNICAL SKILLS

Machine Learning and Statistics: Scikit-learn, XGBoost, LightGBM, CatBoost, Optuna, Pandas, NumPy, Feature Engineering, Cross-Validation, Calibration, SHAP, A/B Testing, Statistics

Data and Analytics: SQL, Pandas, NumPy, DuckDB, Statistical Testing, Experiment Design, H3 Geospatial Indexing, Graph Analytics, Power BI, Excel, Data Visualisation

Deep Learning: PyTorch, TensorFlow/Keras, CNNs, ResNet50, VGG16, EfficientNetV2, CNN-LSTM, Transformers, Transfer Learning, Ordinal Regression, Grad-CAM, OpenCV

Languages: Python, C/C++, Java, JavaScript, TypeScript, SQL

Core Computer Science: Data Structures and Algorithms, OOP, DBMS, Operating Systems, Computer Networks, System Design

ACHIEVEMENTS

- SWITCH Energy-X (India): 11th of 93 on the private leaderboard, recovering a hidden physical law from 500,000 unlabeled, 26%-missing sensor rows.
- KSP Datathon 2026 finalist: reached Level 2 with Kadi, a crime analytics platform built end to end over 50 days and deployed on Zoho Catalyst for the Karnataka State Police.

EDUCATION

The LNM Institute of Information Technology, Jaipur **2023 - 2027**

B.Tech, Computer Science and Engineering CGPA: 7.11 / 10

LEADERSHIP

- Coordinator, Debate Society, LNMIIT Jaipur (May 2025 - Apr 2026): led a 150+ member society across debates, discussions and inter-college competitions.
- Secretariat and Organizer, LNMIIT Model United Nations (Aug 2025 - Jan 2026): organised a large-scale MUN conference, coordinating delegates, committees, schedules and logistics.
